

### Controller

```
@RequestMapping("/")
public String exam04(HttpServletRequest request) {
    request.setAttribute("키", "값");
    request.setAttribute("키", "객체");
    return "jsp/exam";
}
```

```
@RequestMapping("/")
public String exam04(Model model) {
    model.addAttribute("키", "값");
    model.addAttribute("키", "객체");
    return "jsp/exam";
}
```

### EL(Expression Language)

`${키}`  
: request에서 값을 찾아옴
